- ← Members who mentioned this specific treatment in 5 or more posts
- ← Average amount of time on forum (average of green bars above)
- ← Total amount of days members have been on the site (all green bars added up)
- ← Is there a tight distribution of the green bars?
- ← Percentage of members on site greater than 1000 days
- ← Percentage of members on site greater than 500 days
- ← Percent on site < 100 days, but this includes new members, so not ranked
- ← Percent recently visiting site in last 30 days (12/6/2012 minus 30 days)
- ← Is this treatment given soon after Stage IV diagnosis or is there a lag
- ← Average days that elapse before member is put on this treatment
- ← Is there a tight distribution on when this treatment is used?
- ← What percentage of members had treatment within 30 days?
- ← Percent of members using this treatment who have liver metastasis
- ← Percent of members using this treatment diagnosed with HER2-

How to read the charts

Trastuzumab (Herceptin) used as example

Example: TammyP (member name changed)

TammyP's last post to any part of the forum was on 9/3/2012
 Her first post to any part of the forum site (not just Stage IV) was on 7/18/2009

She posted 60 times to various areas of the breast cancer forum
 She posted 11 times to the Stage IV forum

Her first post on Herceptin was the day she joined the forum
 When she entered the forum, she immediately posted to Stage IV
 She was on a clinical trial of Herceptin before it was approved

Findings

Abraxane

Performs better when 2nd quartile added into analysis (8 of 11 measures in 1 & 2 Q)

Injectable form of Paclitaxel, which also appears in the Top Q

Abraxane popular, used early, good survival at 500 days, inconclusive at 1000 days

Adriamycin

Not as popular, used earlier than later, if at all - poor survivability

Aredia

Supportive drug (bone metastasis) that's not popular, but great performance as a support

Aromatase Inhibitor (AI)

Good all around performer; hovers just below the Top Q; bit of variance on survivability

Capecitabine

Covered in analysis pages (earlier in deck)

Carboplatin or Cisplatin

Not popular; not used often; survival above 1000 days inconclusive (lack of data)

Cyclophosphamide

Popular enough to have enough data to not recommend for long term survival

		562	Neulasta	Greater than 500 days	31.25%	3	1st Q

Findings

Dexamethasone

Drug for side effects; not popular; not used early in treatment

Docetaxel (Taxotere)

Very poor performance, but popular nonetheless; tight distribution supports performance conclusion

Fulvestrant (Faslodex)

Good survival; not used as first line treatment; popular, but survival has a higher variance

Halaven

FDA approved after 2 prior treatment, which explains why not used early in treatment

Poor performance; used late, but no member greater than 1000 days

Hormone Treatment

See separate hormone analysis after findings section...

Hysterectomy

Not popular; not used early; poor performance

Interestingly, it's much more popular with liver metastasis and HER2- (both rank #1)

Ixempra

Secret weapon? Very, very unpopular, but great medium term survival stats

Approved back in 2007, so not a new drug; needs more investigating

Letrozole

See separate hormone analysis after findings section...

Neulasta

Supportive drug; not popular; not given early; but survival numbers are stronger than average

Findings

Paclitaxel

*Popular; used early; long-term survival ok, but average survival much lower
Distribution inconclusive; recommend injectable form (Abraxane) over this*

Perjeta

Not popular enough to draw conclusions; newer drug, but bottom Q on most measures

Port (Implantable)

*Supportive measure used to deliver treatments
Very popular; used early*

Radiation

*Extremely popular; hit or miss; if it works, good prospects, but wide variance
Overall, seems to miss more than hit; mixed on timing to give treatment*

Radiofrequency (any surgery)

Covered in analysis pages (earlier in deck)

TAC (Taxotere + Adriamycin + Cyclophosphamide)

*Most popular treatment for metastatic breast cancer; average survival though marginal
Wide distribution in effectiveness; 500 day survival in 3rd Q; used earlier than later*

Note: drugs take separately fair no better

Adriamycin and Cyclophosphamide weak long term performers

Docetaxel (taxotere) also a poor performer on it's own

Findings

Tamoxifen

See separate hormone analysis after findings section...

Trastuzumab (Herceptin)

Covered in analysis pages (earlier in deck)

Tykerb

Not popular; poor performance; not given early; distribution supports findings

Vinorelbine

Not as popular; not used early; but performance in promising

Good medium term survival; bit too wide a distribution for strong recommendation

Needs more investigating

Zometa

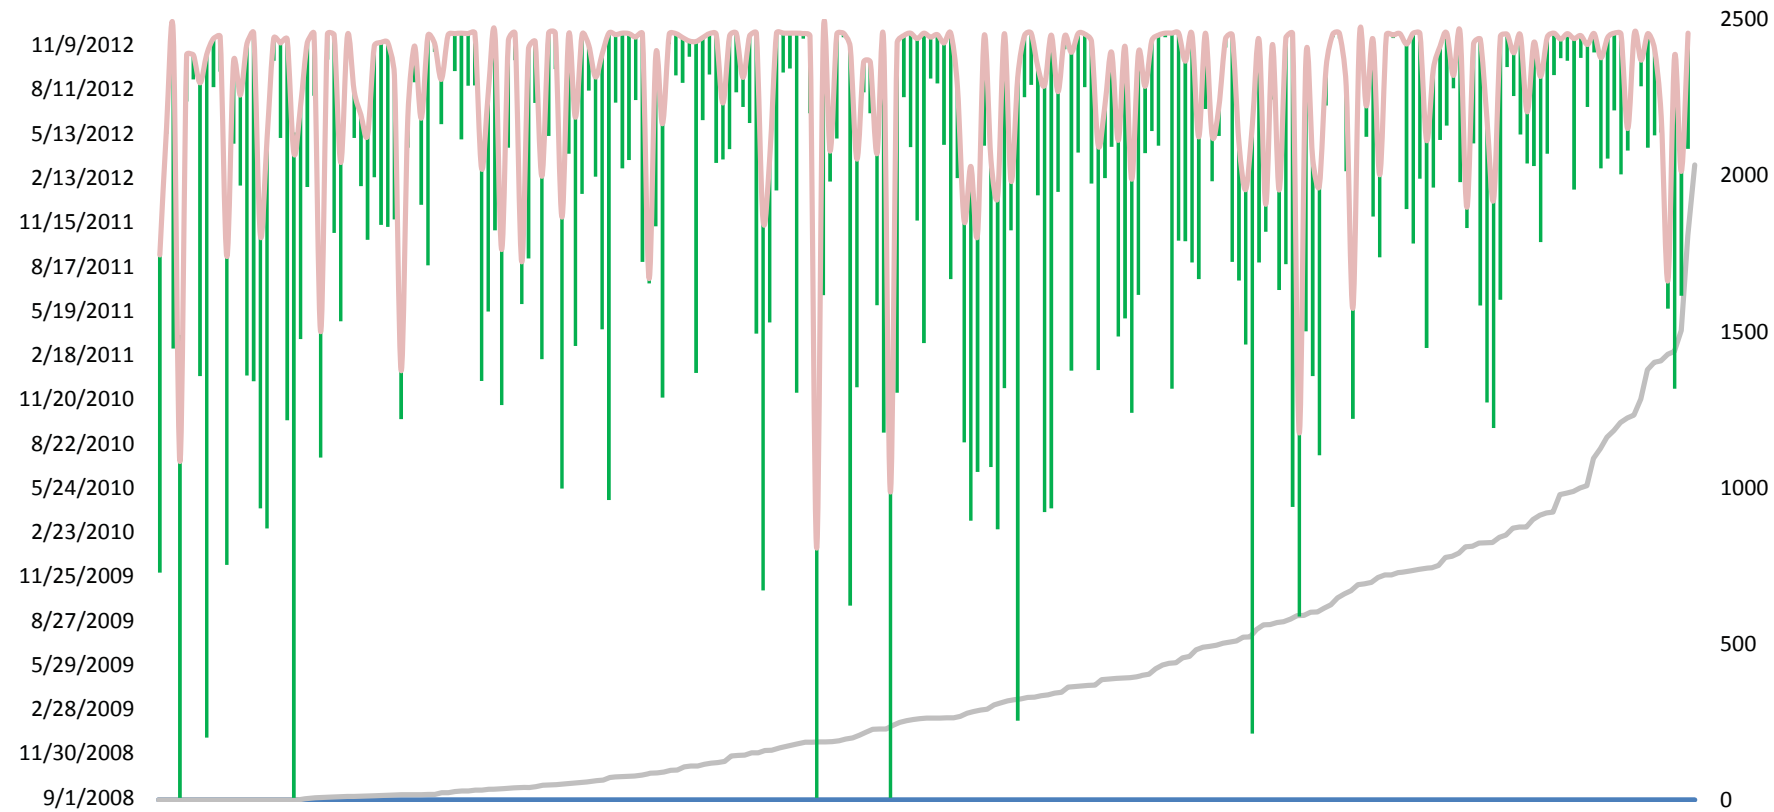

Popular support drug; good survival support, both longer term and average

Not used right at start or end; prescribed as it becomes needed

Hormone Treatments

Tamoxifen OR Fareston OR Letrozole OR Arimidex OR Aromasin OR Femara OR Zoladex OR Lupron OR Megace OR Halotestin OR hormone treatment OR hormone therapy OR hormonal therapy

Members Analyzed	229
Green Bars	
Average Green	306.35
Total Green Days	70154
Green Standard Deviation	273.86
Time on Stage IV Forum	
Greater than 1000 days	2.18%
Greater than 500 days	20.09%
Less than 100 days	27.95%
Percent who recently visited site (12/6/2012)	55.02%
Days to Treatment	
Line Slope Overall	8.56
Line Slope - 1st 100 days	1.20
Average Days to Start Treatment	379
Standard Deviation	397.80
Percent treated soon after joining forum	20.52%
Other	
Percent with liver metastasis	13.97%
Percentage reporting HER2-	22.27%

Members analyzed in the Top Q; third only to TAC (TAC not effective) and radiofrequency (popular, but lower performance)

Green bar analysis: Top Q for survival > 1000 days; low 2nd Q for > 500 days; 306 days average in 3rd Q

Not used immediately, but chosen as treatment early in overall plan

High variance in effectiveness (Bottom Q)

Recommendations

Aredia	Highly Recommended	For bone metastasis; surprise performance considering how unpopular; need more data to confirm
Ixempra	Highly Recommended	Slow to be adopted; almost hidden treatment; need lot more data, but survival trends very interesting
Port	Highly Recommended	Reduces anxiety, much easier to administer treatments; popular and start it early in process
Vinorelbine	Highly Recommended	Marginal use, but very promising average and medium term survival; unfortunately given late in plan
Abraxane	Recommended	Better than paclitaxel, solid short term performance; marginal performance longer term
Anastrozole	Recommended	Although no Top Q ranks, 10 of 11 ranks were solid 2nd Q; maybe not a star, but solid enough
aromatase inhibitor	Recommended	Too much variance in survival, but average and long term numbers look good
Dexamethasone	Recommended	Anti-inflammatory (side effect) drug that's unpopular, but seems to be used by longer term survivors
Fulvestrant (Faslodex)	Recommended	Too wide variance is the only negative; good average and longer term survival
Halaven	Recommended	Good prospects, but used only very late in treatment plan; need to analyze more data
Hormone Treatment	Recommended	Variance too high, but average and medium survival rates promising; given a bit late in treatment plan
Neulasta	Recommended	Extremely unpopular side effect drug, but survival results positive; need a lot more data, but promising
Trastuzumab (Herceptin)	Recommended	Popular and proven; good survival; need more analysis on variance of effectiveness
Zometa	Recommended	Popular side effect (bone damage) drug with great survival support; used a little late in the plan
AC	Not Recommended	2 of the 3 TAC drugs and TAC an under performer
Adriamycin	Not Recommended	Not enough data to recommend, but performance trends are poor
Bevacizumab	Not Recommended	Poor overall performance and used late in the treatment plan
Capecitabine (Xeloda)	Not Recommended	Enough data to show it's ineffective, both on average and in the long run
carboplatin	Not Recommended	Not used widely; high variance in survival; stronger performance at 1000 days, but needs lot more data
cisplatin	Not Recommended	Hit or miss; wide variance; show longer term potential, but not enough data to draw conclusion
Cyclophosphamide	Not Recommended	Some of the worst performance in the analysis; very small variance, which confirms poor performer
denosumab	Not Recommended	Poorer than average performance on almost every measure
Docetaxel (Taxotere)	Not Recommended	Poor performance confirmed by tight variance; popular enough to judge ineffective
Everolimus (Afinitor)	Not Recommended	Rarely used, even though it's been around for awhile; bottom performer
Gemcitabine	Not Recommended	All measures either 3rd Q or Bottom Q; enough data to judge a poor performer
hysterectomy	Not Recommended	Poor performance; last resort; seems to help repress hormones more than trying to remove them
Paclitaxel	Not Recommended	Popular, but very poor performance, both on average and longer term
Perjeta	Not Recommended	Just approved by FDA, not enough data to draw conclusions, but taking a risk with something so new
Radiation	Not Recommended	Although hit or miss, more misses; extremely popular, odds worse than coin flip
Radiofrequency/Surgery	Not Recommended	Extremely popular; lot's of short term survival, but average and longer term not good
TAC	Not Recommended	Poor average and medium term survival; wide variance in effectiveness
Tykerb	Not Recommended	Poor performance; tight variance supports

JOY TO THE WORLD – I'M CANCER FREE!!!

Posted by gracefulwomanwarrior in Uncategorized

For those of you not on Facebook... We have BIG news today... Apparently I am now CANCER FREE!!!

I am still in a state of shock.

Graceful Woman Warrior

What?!! Metastatic Breast

Thin slice the analysis by type of metastatic breast cancer. HER2+ or HER2-, metastasized first to bone or liver, etc...

Apply Text Analysis Algorithms

I thought I'd join in since I'm an Afinitor sister too. I've been on Afinitor 10 mg for about 3 months now and it's being used in combo with Arimidex.

sister right after drug name

been on [drug name]

combo used between two drug names

Can use word order, proxemics, parts of speech analysis and other search engine algorithms to evaluate the context of every post

I asked my surgeon about SIRT this week. He really was not giving me any hope about doing anything more for me, but it was a vague possibility ...

asked about it does not mean treated with it

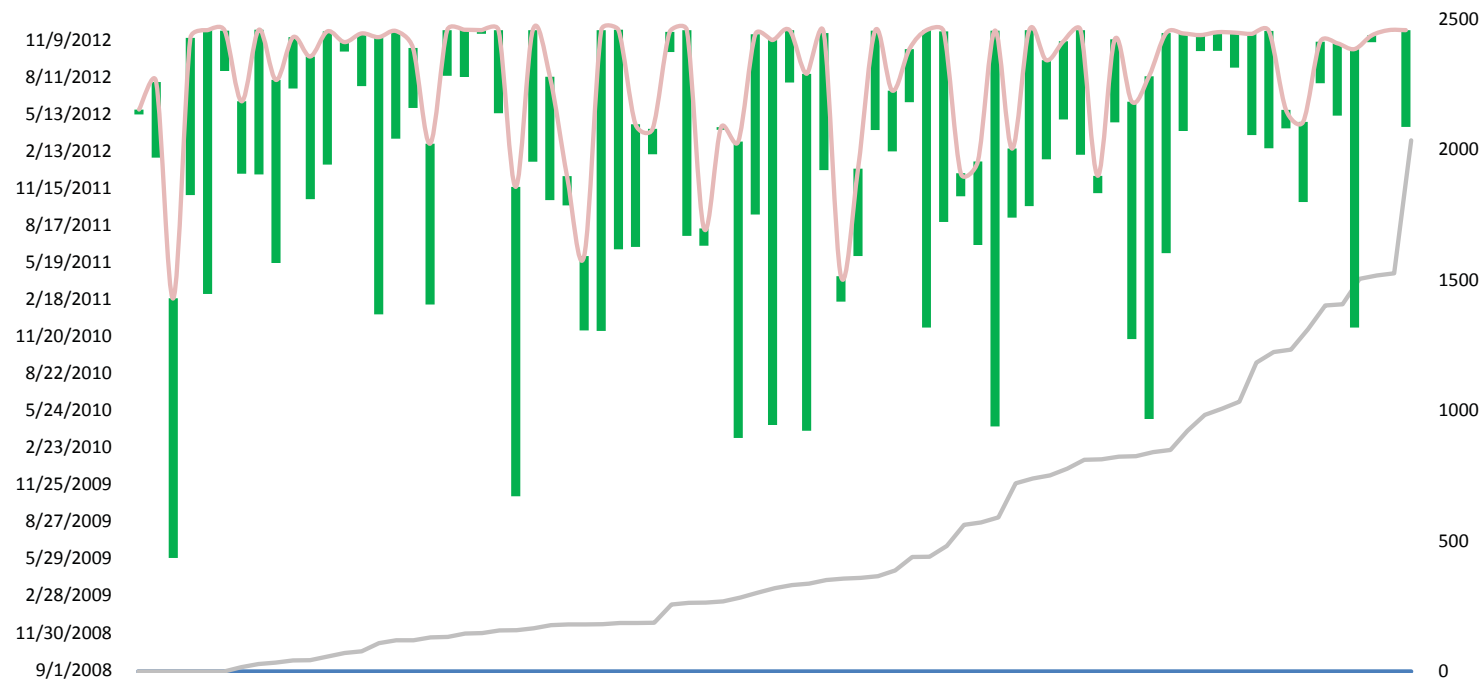

Algorithms can distinguish between researching, offering support and actually taking the treatment. We can follow the journey of every single member.
